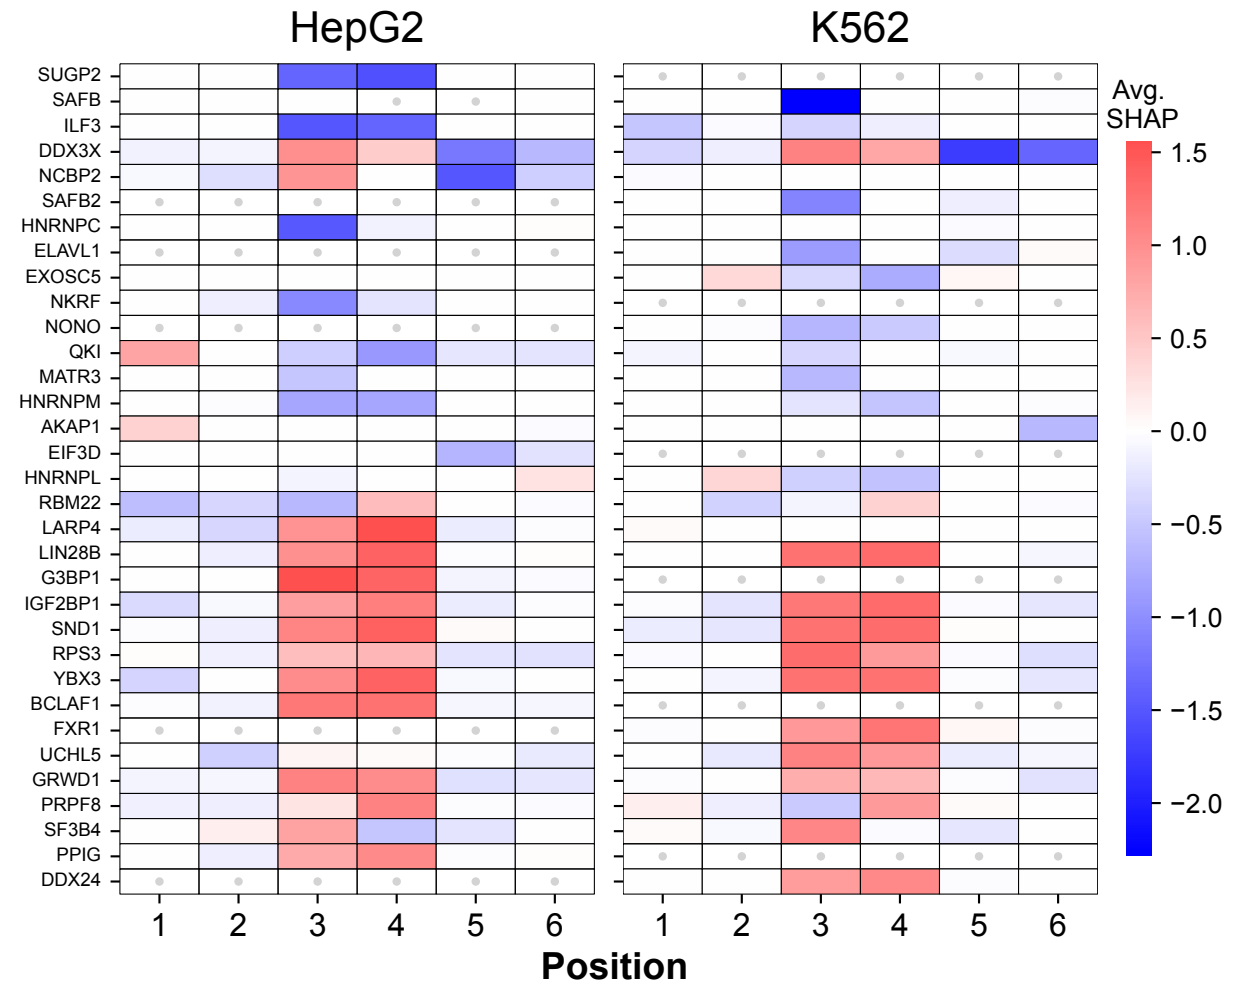
NOTE 1: Per cell line, took max and min of each RBP across all 6 positions and then took the top 10 highest max values and top 10 RBPs with lowest min values while dropping duplicates between min and max by favoring 'min'

NOTE 2: Values organized from min to max
NOTE 3: Null values shown with a gray dot
NOTE 4: Using Unique-Binding data


Top 10 Max/Min RBPs Per Cell Line
