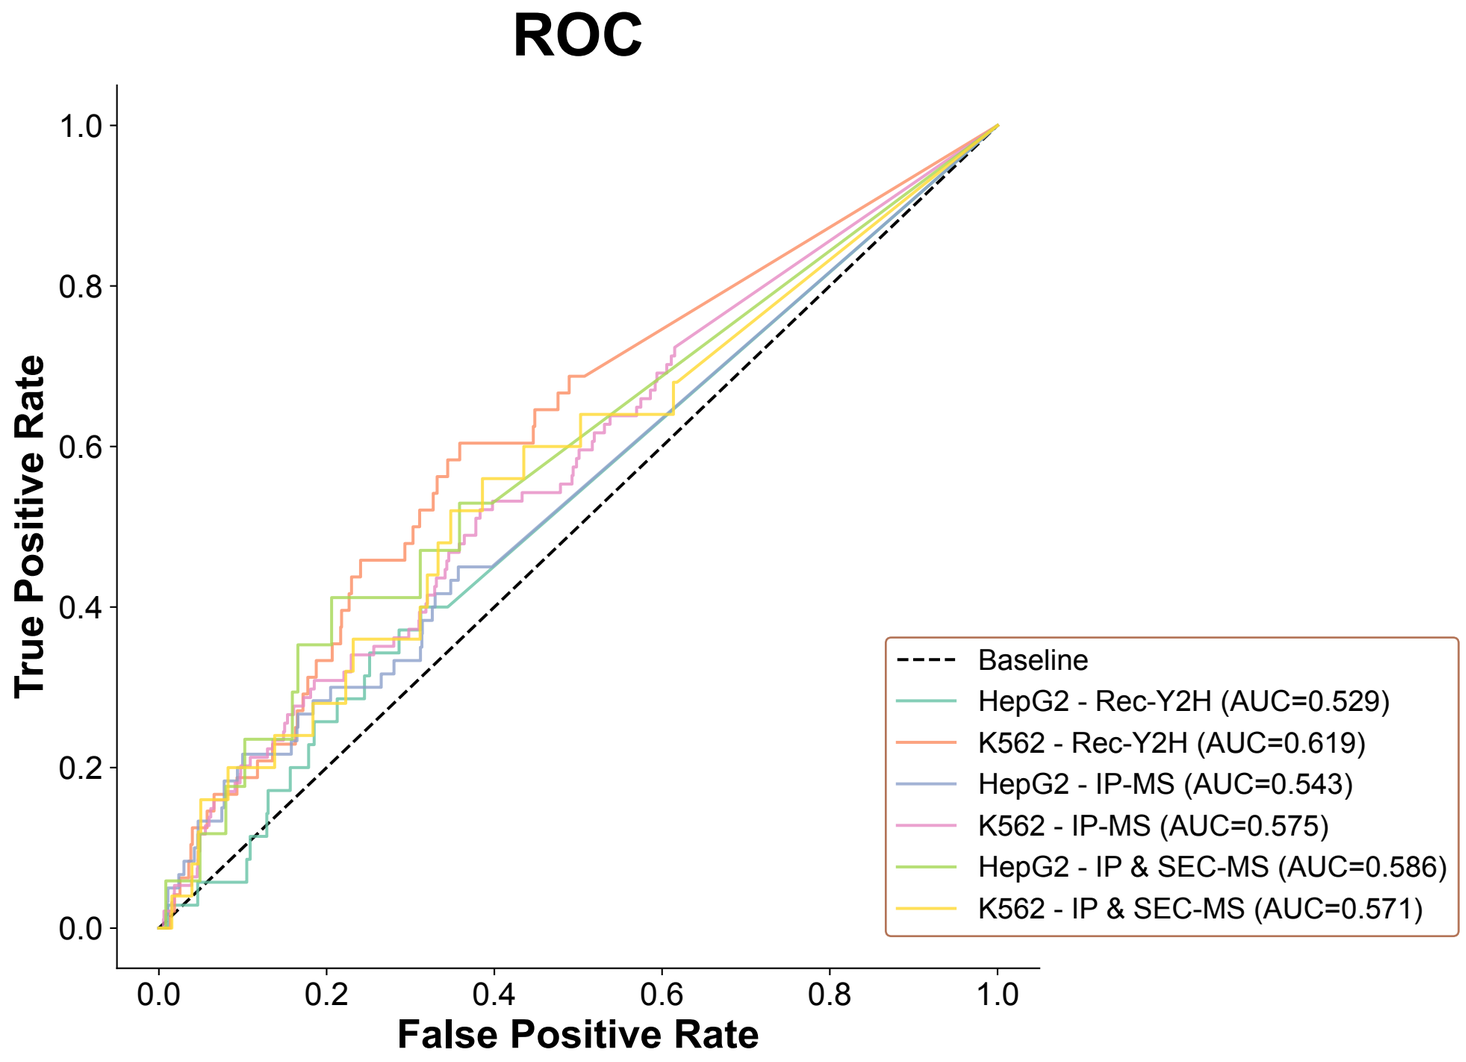
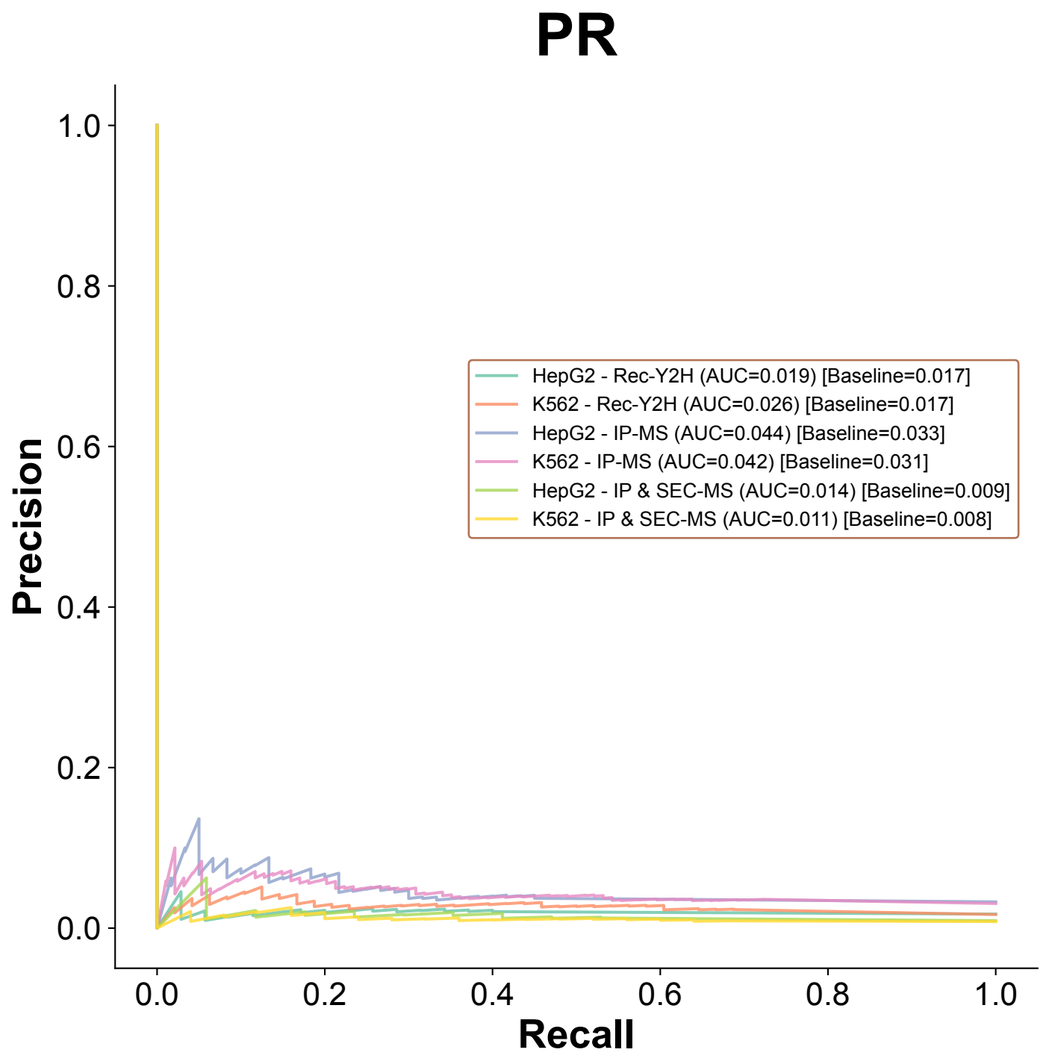
NOTE 1: PPI status: True (tested & interacts), False (tested & no interaction), and Null (not tested)
NOTE 2: Null PPI values removed from curve creation to keep only True Positive and True Negatives
NOTE 3: [Only applicable to 'Bound-Only' based metrics] NaN values removed (aka. no binding observed)
NOTE 4: "Same" and "Different" position PPI curves subset to only interactions at same or different positions, respectively
NOTE 5: Curve creation does not include INTRA-RBP interactions (e.g. RBFOX2_3-RBFOX2_4)
NOTE 6: Union PPI is: True (either resource) --> True, then False --> if either resource is False, else None (and hence, removed)




RBP-SPECIFIC_SUM_VALUE: ROC and PR Curves by Cell Line and PPI Source & PPI Type
